PRESSURE CONTROL VALVES

INTRODUCTION

PROPORTIONAL IT PRESSURE REDUCING VALVES

The proportional IT pressure reducing valves, are made to remotely control directional control valves with hydraulic actuators or to control variable displacement pump regulator devices.

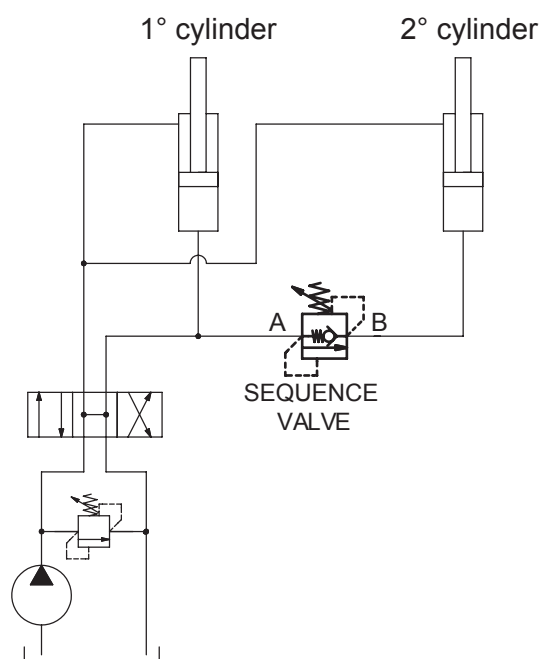

Thanks to the special architecture that enables all the components to be build into the electro-proportional coil, the IT pressure reducing valves are very compact having a flange mounting assembly, this solution does not require any machining of the cavity.

Feeding the coil with current (PWM 120Hz) from “0” to “I max” it is possible to create a proportional increase of the regulated pressure in the V port.

Besides the IT27 version, as a single components, we can offer solutions that are already assembled into a body with CETOP 2 and CETOP 3 flanging or for in-line assembly.

IN LINE SEQUENCE VALVES

The sequence valves are used when it is necessary to hydraulically control the sequence of two or more movement using a single source of power, establishing the priority of a movement versus another one. As an example, we may allow the start of a cylinder only after the system reaches a specific pressure. Sequence valve are based on a relief valve combined with a check valve that allow the oil passage in reverse with a low pressure drop.

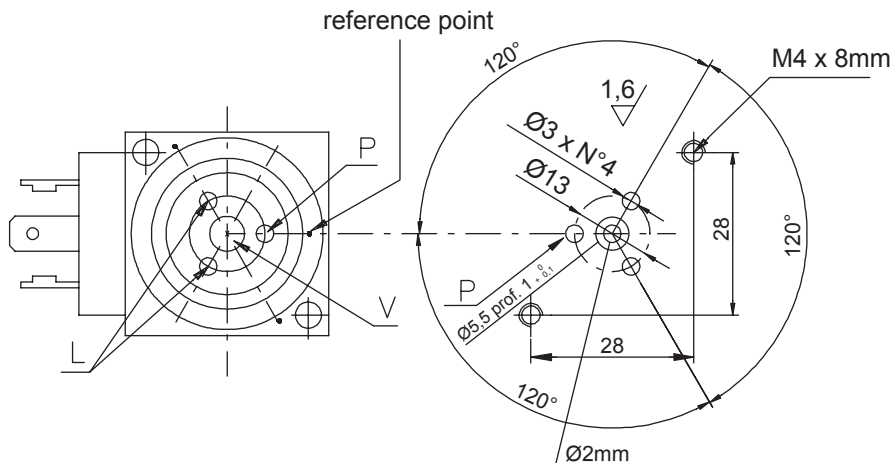

As per the relief valves, also the sequence valves can be produced as direct acting or pilot operated as well as fully balanced not sensitive to back pressure.

PROPORTIONAL PRESSURE REDUCING VALVE FLANGE MOUNTING

- Max working pressure in P..... **50 bar**
- Max working pressure in L..... **1 bar**
- Max working flow..... **2 l/min**
- Leakage..... **8 cc/min**
- Seals..... **NBR**
- Max current at 12 Vcc..... **1800 mA**
- Max current at 24 Vcc..... **900 mA**
- Hysteresis..... **5%**
- PWM..... **120 HZ**
- Protection index with standard connector..... **IP-65**
- Screw tightening torque..... **3 Nm**
- Weight..... **0,44 Kg**
